

MPOSTER SERIES

Mobile COB LED Totem

The Direct View Solutions MPoster Series is a versatile range of premium mobile LED COB totems engineered to deliver exceptional visual performance. Designed for both standalone deployment and seamless daisy chaining, the MPoster Series enables you to create striking, scalable LED display solutions with minimal setup complexity.

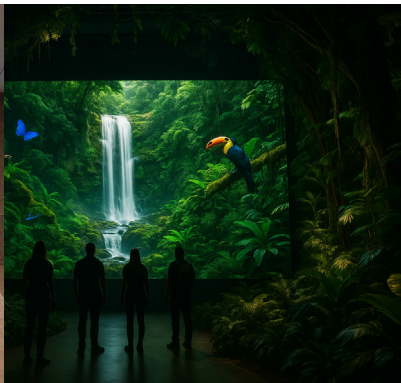

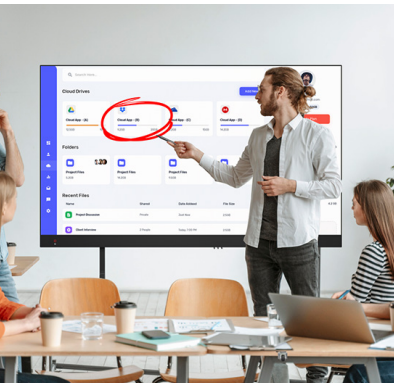

Utilising Chip-on-Board (COB) LED technology, the MPoster Series offers superior image uniformity, enhanced durability and improved viewing comfort. The fully encapsulated LED surface provides increased resistance to impact and dust ingress while delivering outstanding contrast ratios, deeper blacks and ultra-smooth pixel performance.

Mobile COB LED Totem

MODULAR DAISY CHAINING

The MPoster Series has been engineered around true modular scalability. Each mobile LED totem operates as a fully independent digital display, yet can be physically aligned and linked with additional units to form seamless, large-format mobile LED walls.

By connecting multiple MPoster Displays together, you can create high-impact visual canvases that rival fixed LED installations (without committing to permanent infrastructure). When the requirement changes, simply separate the units and redeploy them individually across different zones, events or venues.

PREMIUM DISPLAY SOLUTION

At the heart of the Direct View Solutions Glide is our Clario COB LED technology, engineered to deliver exceptional visual performance and long-term reliability. Each Clario panel is precision-built using tightly packed LEDs that produce outstanding brightness, uniform colour reproduction, and seamless image consistency across the entire display surface.

5 YEAR WARRANTY

Every product within the Direct View Solutions MPoster Series is backed by a comprehensive 5-year manufacturer warranty, significantly exceeding the industry standard.

In a market where 2-3 year warranties are commonplace our extended coverage reflects the confidence we have in our engineering standards, component selection and quality control processes. This is not an optional upgrade or add-on. It is built into every system as standard.
